The presence of a prescription drug on the formulary does not guarantee that a member will be prescribed that prescription drug by his or her prescribing provider for a specific medical condition. As required by law, the Company periodically updates the formulary with any changes. The notice may include a description of the types of changes and the date on which the changes are effective. Changes may include the addition or removal of a drug, dosage, or method of administration from the formulary. A change in tier placement also may occur, resulting in an increase or decrease in the eligibility offering which could, in turn, impact cost-sharing for the member. Due to the constant changes to the formulary, it is possible during a membership year certain tiers may, or may not, have any drugs included within them. An example of a notice change occurs when a drug becomes available in generic form.
